

07 APRIL 2021

In this episode, Laurent Segalen, clean energy banker, trader, investor, and co-host of the [Redefining Energy Podcast](#), joins us to discuss European power trading. Why is there a resurgence in power trading? Where are the opportunities now and, in the future, and who will be participating? We follow the story of power trading in Europe from the salad days of the 2000s driven by deregulation, through to the low price-doldrums of the 2010s, to the present day and beyond in the era of energy transition. What will generation, batteries, the grid and trading look like? What role will hydrogen, digital platforms and blockchain play? Laurent guides us through it all.

### The HC Insider Podcast

Each day, around the world, we have fascinating one-on-one conversations with our connections. Our collaborators are uniquely informed, creative and inspirational in their fields. We want to provide our community a seat alongside us, listening in to these conversations in that special way podcasting provides, as we tackle topical and people related issues with the leaders and leading minds in our sector.

This article was produced as part of HC Insider. HC Insider is Human Capital's dedicated media service. In addition to providing subscribers with relevant and informative editorials, we also report on people moves in the energy and natural resource world.
