

31 MARCH 2021

Commodity Trading Risk Management systems sit at the heart of any commodity trading enterprise. Their design and implementation has been a huge source of pride for some, frustration for others and cost for all in the sector over the past 20 years. However, the role of a CTRM is changing with the broader digitization of the commodity sector itself. Now, CTRMs are becoming the digital core of an organization and must increasingly be understood by traders themselves and able to connect with external systems. Should organizations build or buy CTRMs? Will blockchains and DLTs disrupt the existing CTRM world? These are some of the questions our guest, Richard Payne guides us through. Richard is a Managing Partner at capSpire, a management consultancy focused on the commodity sector.

The HC Insider Podcast

Each day, around the world, we have fascinating one-on-one conversations with our connections. Our collaborators are uniquely informed, creative and inspirational in their fields. We want to provide our community a seat alongside us, listening in to these conversations in that special way podcasting provides, as we tackle topical and people related issues with the leaders and leading minds in our sector.

This article was produced as part of HC Insider. HC Insider is Human Capital's dedicated media service. In addition to providing subscribers with relevant and informative editorials, we also report on people moves in the energy and natural resource world.
