

06 AUGUST 2020

Renewables are here to stay, and many predict the next decade will be solar's decade. David Fernandez, Managing Director of renewable power at Goldman Sachs, joins us to discuss why that might be the case and what the ramifications are for current and future power generators, consumers, and markets.

Why the Solar Decade and what will that mean in terms of scale? What are the benefits for generators and investors? Is it geographically restricted by sunbelts? How will the solar decade change the competitive landscape for current participants? Why has the solar decade not already happened, and will it need governmental support? What does it mean for power traders and risk managers? What will be the key trends in development and deployment as we progress through the next decade?

The HC Insider Podcast

Each day, around the world, we have fascinating one-on-one conversations with our connections. Our collaborators are uniquely informed, creative and inspirational in their fields. We want to provide our community a seat alongside us, listening in to these conversations in that special way podcasting provides as we tackle topical and people related issues with the leaders and leading minds in our sector.

This article was produced as part of HC Insider. HC Insider is Human Capital's dedicated media service. In addition to providing subscribers with relevant and informative editorials, we also report on people moves in the energy and natural resource world.
